

## Atlas Ambassador Digital Media Production Guide

*Videos, Images, Podcasts, Livestream Segments, and Brand-Safe Creative Workflows*

**Internal Training Manual | AtlasSports.AI Ambassador Program**

|   |                                                                                                                                                                                                                                         |
|---|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ! | <b>Core Idea</b><br><br>Ambassadors are not just posting ads. They are creating sports media that naturally shows why Atlas matters: sports context first, data or model angle second, Atlas connection third, and CTA/disclosure last. |
|---|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

Use this guide to create high-quality digital media assets - videos, graphics, podcasts, livestream segments, carousels, screen recordings, thumbnails, overlays, and audio clips - that feel platform-native, useful, credible, and accurate.

*Important: AtlasSports.AI is an informational and statistical analysis platform. Ambassadors must never describe Atlas as a sportsbook, promise guaranteed outcomes, fake performance history, or encourage irresponsible gambling behavior*

**ATLASSPORTSAI**

INTELLIGENCE. ELEVATED. PERFORMANCE. UNLOCKED.

|---|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ! | <p><b>How to Use This Guide</b></p> <p>This guide is a media production operating system. Use it when deciding what kind of video, image, podcast, livestream segment, graphic, carousel, or screen recording to create. It does not replace the sponsor outreach playbook; it teaches ambassadors how to create their own digital content after they understand the brand.</p> |
|---|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

Media Production Mission and Core Rules

The Mission

AtlasSports.AI gives sports-minded users a smarter way to evaluate props, slips, player stats, probability, expected value, market context, injury context, and model-backed sports intelligence. Ambassador media should make that idea visual, practical, and easy to understand. The goal is not to make noisy ads. The goal is to create credible sports media that shows how a serious user thinks through a slate with better context.

The Four-Part Content Formula

| Step                | What It Means                                                                                                             | Example                                                                                           |
|---------------------|---------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------|
| 1. Sports context   | Start with the slate, prop, matchup, injury news, trend, or sports question.                                              | "Tonight's NBA board has a few props that look obvious, but context matters."                     |
| 2. Data/model angle | Explain the research lens: probability, EV, confidence, role, pace, injury context, market movement, or simulation logic. | "I'm checking role, minutes, matchup, line value, and model confidence before I trust the trend." |
| 3. Atlas connection | Show how Atlas helps organize the research or compare the board.                                                          | "Atlas gives me a model-backed view so I can slow down before forcing a slip."                    |
| 4. CTA/disclosure   | Mention the code after value has already been delivered.                                                                  | "Use code [CODE] if you want to try Atlas. I may earn a referral payout."                         |

## **Atlas Positioning for Media Assets**

- Atlas is an AI-driven sports intelligence platform, not a sportsbook.
- Atlas helps users evaluate probabilities, EV, slip outputs, market context, injury context, and model diagnostics.
- Atlas is strongest when presented as a research stack: data, model output, user judgment, and responsible decision-making.
- NBA is the current production focus, with MLB, NFL, AtlasGPT, the mobile app, and deeper simulation workflows on the roadmap.
- Ambassadors may create in their own voice, but must not create fake outcomes, fake screenshots, fake records, or guaranteed-win claims.

SECTION

02

Content Pillars and Creative Angles

Ambassadors need repeatable creative lanes so they are never guessing what to make. A content pillar is a recurring type of media asset that can be recreated across sports, slates, and platforms.

| Pillar                       | Best Media Assets                                         | Purpose                                                                                        | Avoid                                                              |
|------------------------------|-----------------------------------------------------------|------------------------------------------------------------------------------------------------|--------------------------------------------------------------------|
| Daily Slate Energy           | Short clips, story videos, livestream openers, X graphics | Build anticipation around the day's board without promising outcomes.                          | Do not turn excitement into guarantees.                            |
| Model Heat Checks            | Short-form video, screen recording, quick graphic         | Show what the model is making you pay attention to.                                            | Do not show private model internals unless approved.               |
| Before/After Breakdowns      | Recap videos, carousel, X thread graphic, podcast segment | Teach process by comparing pre-game reasoning to post-game results.                            | Do not cherry-pick wins without context.                           |
| Educational Sports Analytics | Carousels, long-form videos, podcasts, diagrams           | Explain concepts like EV, confidence, variance, role, pace, market context, and injury impact. | Do not overload beginners with too many terms at once.             |
| Product Walkthroughs         | Screen recording, livestream demo, YouTube explainer      | Show how Atlas fits into a research workflow.                                                  | Only use public-facing or approved views.                          |
| Roadmap Hype                 | Announcement graphics, short videos, podcast mentions     | Build excitement around MLB, NFL, AtlasGPT, mobile app, and simulation improvements.           | Do not promise exact dates or features unless Atlas approves them. |

|                          |                                                                    |                                                |                                                          |
|--------------------------|--------------------------------------------------------------------|------------------------------------------------|----------------------------------------------------------|
| Community Reaction / Q&A | Livestream segment, Discord clip, TikTok response, podcast mailbag | Answer real audience questions and objections. | Do not give legal, financial, or gambling advice.        |
| Research Workflow Clips  | Short-form video, carousel, graphic checklist                      | Show how you personally think through a slate. | Do not present your personal opinion as Atlas guarantee. |

## The Content Ladder

| Level                  | Ambassador Goal                                          | Media Example                                                                                       |
|------------------------|----------------------------------------------------------|-----------------------------------------------------------------------------------------------------|
| Level 1: Awareness     | Make people understand what Atlas is.                    | A 20-second Reel: "I use Atlas to check probability, EV, and injury context before I build a slip." |
| Level 2: Trust         | Show that the ambassador thinks clearly and responsibly. | A carousel: "5 things I check before trusting a prop trend."                                        |
| Level 3: Demonstration | Show the tool or workflow in action.                     | A screen recording: public board -> slate context -> personal interpretation.                       |
| Level 4: Conversion    | Give the viewer a reason to try Atlas.                   | A CTA clip or graphic with code, disclosure, and no guaranteed-outcome language.                    |
| Level 5: Retention     | Keep users interested after first exposure.              | Weekly recap, product update, roadmap discussion, or community Q&A.                                 |

|   |                                                                                                                                                                                            |
|---|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ! | <p><b>Creative Rule</b></p> <p>Every asset should have one job. Do not try to explain the whole platform, sell the code, recap the slate, and teach EV all in the same 20-second clip.</p> |
|---|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

SECTION

03

Platform-Native Media Format Guide

Each platform rewards a different kind of media asset. The same Atlas idea should be shaped differently for TikTok, YouTube, Twitch, Discord, and podcasts. Platform-native media feels like it belongs where it is posted.

| Platform           | Best Asset Type                        | Ideal Length  | Creative Style                                                                           | How to Use Atlas                                      |
|--------------------|----------------------------------------|---------------|------------------------------------------------------------------------------------------|-------------------------------------------------------|
| TikTok             | Vertical short-form video              | 15-45 seconds | Fast hook, sports reaction energy, captions, quick cuts, green-screen or face-to-camera. | Hook instantly, show one idea, CTA in final seconds.  |
| Instagram Reels    | Polished vertical short-form video     | 20-45 seconds | Cleaner visuals, tighter captions, strong thumbnail frame, premium sports-tech look.     | Make it look intentional and shareable.               |
| Instagram Carousel | Multi-slide educational graphic        | 5-8 slides    | Bold title slide, one idea per slide, clean charts/checklists.                           | Teach a process, end with Atlas CTA.                  |
| YouTube Shorts     | Vertical mini-explainer                | 30-60 seconds | More structured than TikTok, clear title/hook, educational pacing.                       | Explain one sports/data concept and where Atlas fits. |
| YouTube Long-Form  | Slate breakdown or product walkthrough | 6-12 minutes  | Deeper analysis, screen recording, chapter structure, transparent disclosure.            | Build authority and show process.                     |

|                 |                                                 |                                |                                                                 |                                                              |
|-----------------|-------------------------------------------------|--------------------------------|-----------------------------------------------------------------|--------------------------------------------------------------|
| Twitch / Kick   | Live segment, overlay, screen walkthrough       | 3-10 minutes per segment       | Conversational, chat-driven, repeated disclosure, code overlay. | Use Atlas naturally during a live workflow.                  |
| X / Twitter     | Short video, stat card, thread graphic          | 15-90 sec video or one graphic | Fast opinion, topical timing, clean graphic text, no link spam. | Join the conversation with useful context.                   |
| Discord         | Explainer image, short clip, pinned resource    | One clear asset                | Practical, low-hype, community-friendly, permission-based.      | Give the server a useful research resource.                  |
| Reddit          | Educational diagram, long-form visual breakdown | As needed                      | Non-salesy, text-heavy if needed, transparent, no covert promo. | Teach and discuss, not advertise.                            |
| Facebook Groups | Educational video or graphic                    | 30-90 sec or single graphic    | Clear, less flashy, practical explanation, group-friendly.      | Help members understand a research process.                  |
| Podcasts        | Audio segment or full episode                   | 3-20 minutes                   | Conversational, story-based, process-focused.                   | Explain how Atlas fits without sounding like a fake ad read. |

|   |                                                                                                                                                                                                                                                     |
|---|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ! | <b>Platform-Native Rule</b><br><br>Do not copy one generic ad across every platform. One Atlas idea can become a TikTok, a Reel, a Short, a carousel, a podcast segment, and a livestream talking point - but each version must match the platform. |
|---|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## TikTok

TikTok is for fast discovery, personality, and sports reaction energy. Ambassadors should make quick clips that feel like real sports content first and Atlas promotion second.

| Creative Element   | Guidance                                                                                                                               |
|--------------------|----------------------------------------------------------------------------------------------------------------------------------------|
| Best formats       | Face-to-camera breakdowns, green-screen reactions, screen-recorded board clips, before/after recaps, "one thing I am watching" videos. |
| Hook style         | Big first sentence: "I do not build slips off vibes anymore" or "This prop looks obvious, but I want context first."                   |
| Visual style       | Vertical, captions burned in, one on-screen phrase at a time, quick cuts, no clutter.                                                  |
| When to show Atlas | After the hook and sports context. Show Atlas only when it supports the point.                                                         |
| CTA                | Final 3-5 seconds: "Use code [CODE] if you want to try Atlas. Informational only."                                                     |
| Do not do          | Do not open with a promo code, claim guaranteed wins, or use fake betting slip/balance visuals.                                        |

### TikTok Media Template

TikTok template: Hook -> sports setup -> model/data angle -> what Atlas helps check -> personal take -> CTA/disclosure.

## Instagram Reels and Carousels

Instagram should look more polished than TikTok. Reels can be energetic, but carousels should teach clearly and look premium.

| Creative Element   | Guidance                                                                                              |
|--------------------|-------------------------------------------------------------------------------------------------------|
| Best formats       | Reels, carousel checklists, before/after graphics, roadmap graphics, product feature explainers.      |
| Hook style         | Clean and visual: "Stop building slips without context" or "5 things I check before trusting a prop." |
| Visual style       | Dark sports-tech backgrounds, clean text, strong contrast, blue accents, readable charts.             |
| When to show Atlas | Slide 5-7 in a carousel or final third of a Reel after the research process is explained.             |
| CTA                | Last slide, pinned comment, story link sticker, or final Reel frame.                                  |
| Do not do          | Do not bury disclosure under hashtags or create cluttered graphics with tiny text.                    |

### Instagram Reels and Carousels Media Template

Carousel template: Title -> Problem -> Research factors -> Atlas workflow -> CTA/disclosure.

## YouTube Shorts

YouTube Shorts should be a mini-lesson. They can move fast, but they should be clearer and more structured than a TikTok reaction.

| Creative Element   | Guidance                                                                                                       |
|--------------------|----------------------------------------------------------------------------------------------------------------|
| Best formats       | One-prop breakdowns, "before you add that leg" clips, model-vs-trend explainers, quick dashboard walkthroughs. |
| Hook style         | Educational problem: "Before you add that prop, check this."                                                   |
| Visual style       | Vertical with large captions, clear title, simple screen recording or face-to-camera.                          |
| When to show Atlas | Middle or final third: show how Atlas helps organize the research.                                             |
| CTA                | End screen and description: "AtlasSports.AI - use code [CODE]. I may earn a referral payout."                  |
| Do not do          | Do not call it a lock, guarantee, or must-bet.                                                                 |

>

YouTube Shorts Media Template

Shorts template: Problem -> 2-3 research checks -> Atlas connection -> responsible CTA.

## YouTube Long-Form

YouTube long-form is where ambassadors build authority. Use it for slate previews, product walkthroughs, educational series, roadmap discussions, and deep recaps.

| Creative Element   | Guidance                                                                                                                     |
|--------------------|------------------------------------------------------------------------------------------------------------------------------|
| Best formats       | 6-12 minute slate breakdowns, 3-minute feature explainers, weekly recap videos, beginner guides.                             |
| Hook style         | Tell the viewer what they will learn: "Today I am showing how I research a slate using role, injury context, EV, and Atlas." |
| Visual style       | Clear chapters, screen recording, face-cam if available, simple B-roll, readable dashboard clips.                            |
| When to show Atlas | After setting the sports question, then again during workflow explanation.                                                   |
| CTA                | One CTA after first useful section and one at the end.                                                                       |
| Do not do          | Do not make the entire video a sales pitch or show private/premium information without approval.                             |

### YouTube Long-Form Media Template

Long-form template: Intro -> slate context -> research process -> Atlas workflow -> examples -> takeaways -> CTA/disclosure.

## Twitvh and Kick Livestream Segments

Live content should feel like a workflow, not an interruption. Ambassadors should use Atlas during real sports talk, slate review, Q&A, or community analysis.

| Creative Element   | Guidance                                                                                                 |
|--------------------|----------------------------------------------------------------------------------------------------------|
| Best formats       | Pre-game slate review, chat Q&A, live build-with-me session, post-game recap, dashboard walkthrough.     |
| Hook style         | Conversational: "Quick disclosure - I am an Atlas ambassador. Let me show how I am checking this slate." |
| Visual style       | Clean overlay, code panel, readable browser zoom, no crowded screens.                                    |
| When to show Atlas | During the research segment, not randomly every few minutes.                                             |
| CTA                | Chat command, overlay, panel, and verbal reminder after the segment.                                     |
| Do not do          | Do not claim the tool guarantees outcomes or pressure chat to spend money.                               |

### Twitvh and Kick Livestream Segments Media Template

Live template: Disclosure -> sports question -> Atlas/demo -> chat Q&A -> code reminder -> responsible-use statement.

## X / Twitter Video and Graphics

X works best for timely media: quick graphics, short clips, stat cards, and concise video observations around live sports conversations.

| Creative Element   | Guidance                                                                             |
|--------------------|--------------------------------------------------------------------------------------|
| Best formats       | Stat cards, 30-second clips, simple charts, thread graphics, injury-context visuals. |
| Hook style         | Topical and sharp: "Hit rate alone is not enough on this prop."                      |
| Visual style       | Minimal text, one chart or one point, strong contrast, no clutter.                   |
| When to show Atlas | After the point is made or in a follow-up visual.                                    |
| CTA                | Use sparingly. 1 CTA for every several value assets.                                 |
| Do not do          | Do not turn the feed into constant code spam.                                        |

### X / Twitter Video and Graphics Media Template

X template: Timely sports observation -> data angle -> simple visual -> optional CTA/disclosure.

## Discord and Facebook Group Media

Community media should be practical and respectful. The asset should help the group understand a topic, not feel like a banner ad.

| Creative Element   | Guidance                                                                         |
|--------------------|----------------------------------------------------------------------------------|
| Best formats       | One-page explainers, short clips, pinned resources, Q&A images, simple diagrams. |
| Hook style         | Utility-focused: "Here is a quick checklist for researching props."              |
| Visual style       | Readable, low-clutter, less flashy than TikTok, easy to screenshot or pin.       |
| When to show Atlas | After the educational value is clear and only where promotion is allowed.        |
| CTA                | Soft CTA: "If allowed, use code [CODE] to check Atlas."                          |
|                    |                                                                                  |

### Discord and Facebook Group Media Media Template

Community template: Educational graphic -> responsible note -> transparent ambassador disclosure -> optional code.

## Reddit Educational Media

Reddit is not the place for flashy affiliate graphics. If ambassadors create Reddit media, it should be educational, transparent, and approved by subreddit rules.

| Creative Element   | Guidance                                                                                          |
|--------------------|---------------------------------------------------------------------------------------------------|
| Best formats       | Diagrams, process breakdown images, long-form educational screenshots, no-link visual explainers. |
| Hook style         | Discussion-oriented: "How I think about trends vs model confidence."                              |
| Visual style       | Simple, evidence-oriented, minimal branding unless allowed.                                       |
| When to show Atlas | Only when relevant and allowed, preferably transparently in the body or comments.                 |
| CTA                | Often none in the original post. Respond transparently if asked.                                  |
| Do not do          | Do not pretend to be a neutral user or covertly promote Atlas.                                    |

### Reddit Educational Media Media Template

Reddit template: Educational thesis -> process diagram -> caveats -> transparent Atlas mention only if appropriate.

## Video Production Templates

Video is the highest-impact media format for most ambassadors because it combines voice, personality, sports context, and visual proof. The templates below give ambassadors a repeatable way to produce without starting from zero.

| Template                      | Structure                                                                                                     | Best Use                                                                   |
|-------------------------------|---------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------|
| 15-Second TikTok/Reel         | 0-2s hook. 2-8s sports context. 8-12s Atlas/data angle. 12-15s CTA/disclosure.                                | Use for quick slate energy or one idea. Do not attempt a full explanation. |
| 30-Second TikTok/Reel         | 0-3s hook. 3-10s setup. 10-22s model/data angle. 22-27s personal take. 27-30s CTA.                            | Best all-purpose short-form format.                                        |
| 60-Second YouTube Short       | 0-5s problem. 5-20s context. 20-40s research factors. 40-52s Atlas workflow. 52-60s CTA/disclosure.           | Best for teaching a mini-process.                                          |
| 3-Minute explainer            | Intro. Problem. Why trends are not enough. How Atlas helps. One example. CTA/disclosure.                      | Use for feature explainers and beginner education.                         |
| 8-12 Minute YouTube Breakdown | Intro. Slate context. Research method. Atlas walkthrough. 2-4 examples. Recap. CTA.                           | Use for authority-building and recurring series.                           |
| Livestream Sponsor Segment    | Disclosure. Ask chat a sports question. Show Atlas/public view. Discuss context. Q&A. Code reminder.          | Best for Twitch/Kick or YouTube Live.                                      |
| Screen-Recorded Walkthrough   | Open with what viewer will learn. Show public-facing workflow. Explain one feature at a time. Close with CTA. | Keep zoom high and avoid private content.                                  |

|                          |                                                                                        |                                                          |
|--------------------------|----------------------------------------------------------------------------------------|----------------------------------------------------------|
| Before/After Slate Recap | Show pre-game reasoning. Show result. Explain what worked/missed. Explain lesson. CTA. | Builds trust when honest and educational.                |
| Model Heat-Check Clip    | Hook: model is showing something interesting. Explain why. Add caveat. CTA.            | Good for timely short-form content.                      |
| Roadmap/Update Video     | What is coming. Why it matters. Who benefits. What to watch for. CTA.                  | Use for MLB, NFL, AtlasGPT, app, or simulation upgrades. |

### 15-Second Script Example

|   |                                                                                                                                                                                                                                                                          |
|---|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| > | <b>Template</b><br><br>"I do not build slips off vibes anymore. Tonight, I am checking role, matchup, injury context, and model confidence before I trust this board. Atlas helps me organize that research. Use code [CODE] if you want to try it. Informational only." |
|---|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

### 60-Second Script Example

|   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|---|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| > | <b>Template</b><br><br>"Before I add any prop to a slip, I want more than a trend screenshot. I want to know whether the role is stable, whether the injury context changed, and whether the model agrees with the number. That is why I use AtlasSports.AI. It gives me probabilities, EV views, slip outputs, market context, injury context, and model diagnostics so I can research instead of guess. Use code [CODE] if you want to check it out. I am an Atlas ambassador and may earn a referral payout. This is informational only, not a guarantee." |
|---|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

SECTION

05

Image, Graphic, Carousel, and Thumbnail Templates

Images and graphics are useful because they are fast to consume, easy to save, and easy to repurpose. The goal is clarity. A good Atlas graphic should look like sports intelligence, not a noisy betting ad.

| Asset Type                     | Required Elements                                                                     | Best Use                                                        |
|--------------------------------|---------------------------------------------------------------------------------------|-----------------------------------------------------------------|
| Daily Slate Graphic            | Title, sport/date, 3-5 watchlist items, one context note, Atlas code/disclosure.      | Use before games to build attention.                            |
| Model Watchlist Graphic        | Headline, public stat/context, "model is showing something interesting", caveat, CTA. | Use when a slate has a clear research theme.                    |
| Before/After Recap Graphic     | Before reasoning, result, what was learned, responsible note.                         | Use after games for trust-building.                             |
| How I Research a Prop Carousel | Slide 1 title. Slides 2-6: role, injury, matchup, line, model view. Final slide CTA.  | Best educational carousel.                                      |
| Atlas Feature Explainer        | Feature name, what it means, why it matters, how to use it responsibly.               | Use for EV, confidence, probability, slip outputs, diagnostics. |
| Roadmap Graphic                | NBA live, MLB next, NFL roadmap, AtlasGPT/app/Sobol upgrade notes.                    | Use for product excitement.                                     |
| Livestream Overlay Panel       | AtlasSports.AI, code, disclosure, no guaranteed outcomes.                             | Use during live segments.                                       |
| Twitch/Kick Pop-Up Graphic     | Big logo, short headline, code, website, responsible note.                            | Use as a quick sponsor bumper.                                  |

|                              |                                                                               |                             |
|------------------------------|-------------------------------------------------------------------------------|-----------------------------|
| Discord Announcement Graphic | Simple title, why community may care, code, disclosure, admin-approved text.  | Use only where allowed.     |
| YouTube Thumbnail            | Big face/action/board image, 2-5 words, high contrast, no fake odds/balances. | Use for long-form videos.   |
| X/Twitter Stat Card          | One key point, one supporting stat/context, Atlas angle, optional code.       | Use for topical commentary. |

### Carousel Build Template

| Slide | Purpose           | Example Copy                                                       |
|-------|-------------------|--------------------------------------------------------------------|
| 1     | Hook/title        | How I research player props without guessing                       |
| 2     | Problem           | Hit rate alone can be misleading.                                  |
| 3     | Research factor 1 | Role and minutes matter first.                                     |
| 4     | Research factor 2 | Injury context changes the matchup.                                |
| 5     | Research factor 3 | Line value and model confidence matter.                            |
| 6     | Atlas connection  | Atlas helps me compare probability, EV, and slip context.          |
| 7     | CTA/disclosure    | Use code [CODE]. I may earn a referral payout. Informational only. |

!

**Graphic Safety Rule**

Do not create fake betting slips, fake balances, fake records, or fake user screenshots. Atlas graphics should look like research assets, not scam ads.

SECTION  
06

Podcast, Audio, and Livestream Segment Strategy

Audio and live formats are powerful because they allow ambassadors to explain their thought process. The key is to make Atlas sound like part of a real research workflow, not a forced ad read.

| Audio Format               | Length        | What to Cover                                                                                           | When to Use              |
|----------------------------|---------------|---------------------------------------------------------------------------------------------------------|--------------------------|
| Slate Preview Segment      | 3-8 minutes   | What stands out on today's board, what context matters, and how Atlas helps organize the research.      | Before games start.      |
| Post-Slate Recap           | 5-10 minutes  | What happened, what the model view suggested, what was learned, and what not to overreact to.           | After games.             |
| Beginner Education Episode | 10-20 minutes | Explain EV, probability, confidence, market context, injury context, and variance in plain language.    | Weekly or evergreen.     |
| How I Use Atlas Segment    | 3-6 minutes   | Walk listeners through your workflow: check slate, compare context, review model, decide what to watch. | Great for new audiences. |
| Roadmap Discussion         | 3-10 minutes  | Talk about MLB, NFL, AtlasGPT, mobile app, or simulation upgrades in a practical way.                   | When Atlas has updates.  |

|               |              |                                                                              |                    |
|---------------|--------------|------------------------------------------------------------------------------|--------------------|
| Community Q&A | 5-20 minutes | Answer common questions without giving legal, financial, or gambling advice. | Live or recurring. |
|---------------|--------------|------------------------------------------------------------------------------|--------------------|

## Natural Audio Disclosure

|   |                                                                                                                                                                                                                                                                     |
|---|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| > | <p><b>Script</b></p> <p>"Quick disclosure before we get into the slate: I am an AtlasSports.AI ambassador, and I may earn a referral payout if you sign up using my code. Atlas is an informational sports intelligence platform. Nothing here is a guarantee."</p> |
|---|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## Podcast Ad-Read That Does Not Sound Fake

|   |                                                                                                                                                                                                                                                                                                      |
|---|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| > | <p><b>Script</b></p> <p>"The reason I like Atlas is that it helps me slow down. Instead of just tailing screenshots, I can look at probability, EV, injury context, market context, and slip logic in one workflow. If you want to try the same tool, go to AtlasSports.AI and use code [CODE]."</p> |
|---|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

SECTION

07

Script, Storyboard, and CTA Frameworks

A script framework gives ambassadors enough structure to stay clear without making them sound robotic. The goal is personal voice with brand-safe guardrails.

Universal Script Framework

| Script Part       | Purpose                                                                         | Fill-In Prompt                                           |
|-------------------|---------------------------------------------------------------------------------|----------------------------------------------------------|
| Hook              | Capture attention immediately.                                                  | "Before I trust this prop, I check ____."                |
| Context           | Explain the sport, slate, player, matchup, or question.                         | "Tonight's board has ____ and the key issue is ____."    |
| Data Angle        | Bring in probability, EV, confidence, role, injury, market, or matchup context. | "The factor I care about most here is ____."             |
| Atlas Explanation | Show how Atlas helps with the research process.                                 | "Atlas helps me compare ____ so I am not just guessing." |
| Personal Reaction | Keep the ambassador voice authentic.                                            | "That makes this a spot I am watching, not a guarantee." |
| CTA               | Tell the viewer what to do next.                                                | "Use code [CODE] if you want to check it out."           |
| Disclosure        | Make the financial relationship clear.                                          | "I may earn a referral payout if you sign up."           |
| Responsible Note  | Keep the brand safe.                                                            | "Informational only. No guaranteed outcomes."            |

CTA Placement by Media Type

| Media Type                | Best CTA Location                                        | CTA Style                              |
|---------------------------|----------------------------------------------------------|----------------------------------------|
| Short-form video          | Final 3-5 seconds and caption/description.               | Quick, direct, disclosed.              |
| Long-form YouTube         | Once after the first useful section and once at the end. | Natural and explanatory.               |
| Carousel                  | Final slide and caption.                                 | Visual code + disclosure.              |
| Livestream                | Overlay, chat command, verbal reminder after segment.    | Repeated but not spammy.               |
| Podcast                   | At the start of the segment or after useful context.     | Conversational disclosure.             |
| Discord/Facebook graphic  | Bottom of the asset or admin-approved caption.           | Soft CTA and transparent relationship. |
| Reddit educational visual | Usually no CTA unless rules allow or users ask.          | Transparent and non-pushy.             |

## CTA Bank

- If you want to check out the same tool I am using, go to AtlasSports.AI and use code [CODE].
- I am an Atlas ambassador and may earn a referral payout if you sign up with my code [CODE].
- Use code [CODE] if you want to support the channel and try AtlasSports.AI.
- This is informational only - no guaranteed outcomes. Use data, not guesses.
- I do not want to spam the group, but if the admins allow it, code [CODE] is available for anyone who wants to try Atlas.

Strong vs Weak Media Concepts

Ambassadors need to see the difference between credible media and weak affiliate-style promotion. The strongest media teaches, demonstrates, or recaps. The weakest media just screams a code.

| Weak Concept                                    | Why It Fails                                   | Stronger Atlas Version                                                                                    |
|-------------------------------------------------|------------------------------------------------|-----------------------------------------------------------------------------------------------------------|
| "Guaranteed lock - use my code."                | Creates compliance risk and looks like a scam. | "This is a prop I am watching because role, matchup, and model context are interesting. Not a guarantee." |
| Graphic with fake balance or fake winning slip. | Misleading, risky, and damages trust.          | Before/after recap showing reasoning, result, and lesson learned.                                         |
| Random promo-code image with no sports context. | No value. Looks like affiliate spam.           | Daily slate graphic with 3 research factors and a small CTA.                                              |
| Video only says "sign up now."                  | No reason to care.                             | Video teaches how to research a prop using role, injury context, probability, and Atlas.                  |
| Carousel packed with tiny text and 12 claims.   | Hard to read and not platform-native.          | 5-7 slide carousel with one idea per slide.                                                               |
| Livestream code spam every few minutes.         | Annoys chat and weakens credibility.           | One clean sponsor segment with disclosure, demo, Q&A, overlay, and chat command.                          |
| Podcast ad read with fake hype.                 | Sounds scripted and untrustworthy.             | Personal workflow explanation: "Here is how Atlas helps me research."                                     |

### **Strong Media Pattern**

Sports context first. Data/model angle second. Atlas connection third. CTA and disclosure last.

### **Strong Concept Examples**

- TikTok: "I do not trust hit rate alone - here are the 3 things I check before a prop."
- Carousel: "How I research a prop without guessing."
- YouTube Short: "Before you add that leg, check role, injury context, and model confidence."
- Long-form video: "My full NBA slate research workflow using AtlasSports.AI."
- Podcast segment: "Why trends can fool you if you ignore context."
- Livestream: "Chat, let's walk through tonight's board and see what the model makes us question."

Visual Brand, Screenshot, and Asset Safety Rules

Atlas media should look premium, modern, and data-driven. Ambassadors do not need to be professional designers, but they should avoid messy, misleading, or low-trust visuals.

| Design Area         | Use This                                                                                     | Avoid This                                                                         |
|---------------------|----------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------|
| Visual tone         | Premium sports-tech, clean analytics, dark mode, subtle blue/cyan accents, white/stone text. | Loud gambling-ad visuals, neon overload, clutter, chaos.                           |
| Text                | Large readable headlines, short phrases, one idea per frame.                                 | Tiny text, huge paragraphs on graphics, hard-to-read fonts.                        |
| Screenshots         | Public-facing Atlas views only, cropped to relevant feature, no private data.                | Premium/private content without approval, customer data, Discord private messages. |
| Performance visuals | Real context, honest recap, educational takeaways.                                           | Fake records, fake balances, fake slips, fake testimonials.                        |
| Branding            | Atlas logo, website, code, disclaimer where appropriate.                                     | Impersonating Atlas ownership/employment or using unapproved claims.               |
| Accessibility       | High contrast, captions, readable layout, safe margins.                                      | Low contrast, fast unreadable captions, off-screen text.                           |

Screenshot Safety Checklist

- Use public-facing Atlas views or approved ambassador assets only.
- Do not expose premium/private content unless Atlas has approved it for promotion.
- Do not show customer information, payment data, private Discord content, internal operations, or unreleased model internals.
- Crop screenshots tightly to the feature or concept being explained.
- Add context so viewers understand what they are seeing.
- Do not edit screenshots to make performance look better than it was.

### **Visual Trust Rule**

If a graphic looks like a scam betting ad, remake it. Atlas should look like an intelligence platform: clean, sharp, useful, and responsible.

Production Workflow, Repurposing System, and Review Checklist

A repeatable workflow prevents ambassadors from guessing and helps Atlas identify which media actually works. The same idea should be repurposed across formats instead of created once and forgotten.

Production Workflow

- 1. Choose the sport, slate, topic, or product feature.
- 2. Choose the content pillar: daily slate, model heat check, education, recap, walkthrough, roadmap, or Q&A.
- 3. Choose the media asset type: short video, long video, carousel, graphic, podcast, livestream segment, or screen recording.
- 4. Choose the platform and format the asset for that platform.
- 5. Draft the hook and one-sentence point of the asset.
- 6. Record or design the asset with simple, readable visuals.
- 7. Add captions/subtitles where video or audio is used.
- 8. Add CTA, code, disclosure, and responsible-use statement where appropriate.
- 9. Review for compliance: no guarantees, no fake claims, no private content, no underage targeting.
- 10. Publish, track performance, and save the asset for repurposing.

One Idea Into Multiple Assets

| Original Idea                                  | Repurposed Assets                                                                                                                                             |
|------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| "How I research player props without guessing" | 1 YouTube explainer, 3 Shorts/Reels/TikToks, 1 Instagram carousel, 1 X stat card, 1 Discord explainer graphic, 1 podcast segment, 1 livestream talking point. |
| "Tonight's board has a trap trend"             | 1 TikTok reaction, 1 X clip, 1 livestream Q&A, 1 recap graphic after the game.                                                                                |
| "EV vs hit rate"                               | 1 carousel, 1 YouTube Short, 1 podcast education segment, 1 Reddit-style educational diagram.                                                                 |
| "Atlas roadmap: MLB, NFL, AtlasGPT, app"       | 1 roadmap graphic, 1 Reel, 1 podcast mention, 1 Discord announcement graphic.                                                                                 |

Pre-Publish Review Checklist

- Does the asset deliver value before asking for a signup?
- Is the platform format correct - vertical video, carousel, long-form, overlay, audio, or graphic?
- Is the text readable on a phone?
- Is Atlas positioned as an informational sports intelligence platform?
- Is the CTA clear but not spammy?
- Is the ambassador disclosure clear if compensation is mentioned or implied?
- Does the asset avoid guaranteed-win, risk-free, free-money, and fake-performance claims?
- Does the asset avoid private/premium/customer/internal content unless approved?
- Can the asset be repurposed into at least one other format?

Approved Language, Banned Language, and Compliance Quick Reference

This section should be used before publishing any ambassador-created media asset. Ambassadors can be creative, funny, confident, and personal, but they cannot misrepresent Atlas or create misleading betting-style claims.

| Approved / Safer Language                             | Banned / High-Risk Language   |
|-------------------------------------------------------|-------------------------------|
| AI-driven sports intelligence                         | Guaranteed win                |
| Model-backed sports research                          | Free money                    |
| Probabilities, EV, injury context, and market context | Risk-free                     |
| The model is showing something interesting            | Can't lose                    |
| Not a guarantee                                       | Guaranteed profit             |
| Informational only                                    | This will 100% hit            |
| Use data instead of guessing                          | Bet your house                |
| A spot I am watching                                  | Atlas guarantees this play    |
| My personal lean/opinion                              | Fake balances or fake records |
| I may earn a referral payout                          | Hidden paid relationship      |

!

**Confidence Language Rule**

Ambassadors can speak with personal excitement, but they must not present Atlas as guaranteeing an outcome. If using creator-style phrases like "my favorite spot" or "my lean," make it clear that it is personal opinion and informational only.

## Recommended Disclosure Lines

- I am an AtlasSports.AI ambassador and may earn a referral payout if you sign up with my code.
- This content includes an AtlasSports.AI ambassador link/code.
- AtlasSports.AI is an informational sports intelligence platform. It does not guarantee outcomes.
- Use data responsibly. Nothing here is financial, legal, or gambling advice.
- Use code [CODE] if you want to try AtlasSports.AI and support my content.

## Final Media Principle

### Create Like a Sports Analyst, Not a Banner Ad

The best Atlas media feels like a real sports person showing their process. Be useful. Be honest. Be platform-native. Show context. Explain the data angle. Connect Atlas naturally. Disclose clearly. Protect the brand.
